

AtlasGuard × Canonical

Graduate Software Engineer - Open Source & Linux

Why this project is relevant

- Linux host telemetry agent and systemd deployment.
- Typed Python control plane and resilient sender.
- Bounded state and least-privilege container design.
- CI validates lint, tests and Docker on Python 3.11/3.12.

What I would extend next

1. Ubuntu/Debian packaging
2. journald integration
3. CPU/memory profiling
4. upstream contribution workflow

Honest scope

Does not claim production-grade kernel visibility, distributed durability or eBPF collection.
