

AtlasGuard × Sysdig

Junior AI & Product Enablement Specialist - Italy / Remote

Why this project is relevant

- Repeatable Python/Docker lab scenarios.
- Architecture, threat model and explicit non-goals.
- Runtime events map to stable rule IDs and human-readable findings.
- Direct path to a Falco/eBPF event source.

What I would extend next

1. Falco adapter
2. eBPF-backed source
3. Kubernetes lab
4. courseware
5. false-positive tuning

Honest scope

Not presented as a replacement for Sysdig or Falco; current runtime events are user-space inputs.
